Date of Performance:	10 / 08 / 2026	DIV/ Batch No:	B1
Student Name:	Arjun Santosh Jadhav	Roll No:	16010125079

Experiment No: 1

Title

Design and Development of Clinical Laboratory for Different Tests in Healthcare Sector Front-End using HTML5

Aim of the Experiment

To design and develop a multi-page, use-case-based web portal front-end using HTML5 for a Clinical Laboratory for Different Tests in Healthcare Sector using Calorimeter as a Point-of-Care Technology (KJS-HC-03), demonstrating proper HTML5 document structure, semantic elements, formatting, lists, hyperlinks, images, image maps, tables, forms, and multimedia elements.

Objectives of the Experiment

- **Develop structured and semantic HTML5 web pages** for a Clinical Laboratory Web Portal using appropriate HTML5 elements.
- **Create interactive web pages** for laboratory services such as patient registration, test information, sample collection, diagnostic reports, health packages, and contact details.
- **Apply a real-world healthcare use case** (Clinical Laboratory Management System) as the context for front-end web development using HTML5.
- **Build a complete front-end web portal** that serves as the foundation for further enhancement using CSS3, JavaScript, PHP, and modern web development frameworks.

COs to be achieved

CO1: Developing webpages using HTML and CSS.

Books / Journals / Websites references

1. (Students should write — e.g., MDN Web Docs HTML5 reference, W3C.)

Theory

HTML5 is the latest version of HyperText Markup Language used to create structured and interactive web pages. It introduces semantic elements such as <header>, <nav>, <main>, <section>, <article>, and <footer>, which improve readability, accessibility, and search engine optimization.

HTML5 also supports multimedia elements such as <audio> and <video>, advanced form controls including email, date, number, and range input types, tables, hyperlinks, image maps, and embedded content using <iframe>. These features enable developers to build modern healthcare applications with improved usability and responsiveness. In this experiment, HTML5 is used to design the front-end of an AI-enabled Urine Test Strip Reader System. The portal provides facilities such as patient registration, urine test information, diagnostic reports, analyse details, multimedia awareness pages, and navigation between different healthcare services. The application serves laboratory technicians, doctors, pathologists, and patients by presenting diagnostic information in a structured and user-friendly manner.

Problem Statement

"Clinical Laboratory for Different Tests in Healthcare Sector"

A multi-specialty diagnostic center plans to develop an **HTML5-based Clinical Laboratory Web Portal** to provide information about laboratory tests, online patient registration, sample collection, diagnostic reports, health packages, and laboratory services. The portal will enable patients, doctors, and laboratory technicians to access laboratory information and services efficiently."

A healthcare organization wants to develop a basic HTML5-based web portal front-end for an AI-enabled Urine Test Strip Reader System. The portal should display patient information, urine test parameters, analyse concentrations, diagnostic reports, awareness material, and healthcare services for doctors, laboratory technicians, and patients.

Each task below contributes one page or feature of this healthcare portal, representing different modules of the Urine Test Strip Reader system.

Task 1: Create the Homepage Structure

Scenario

Design the homepage of the Clinical Laboratory Management System.

Requirements

- Use proper HTML5 document structure tags:
 - o <header>, <nav>, <section>, <article>, <aside>, <footer>
- Header must contain:
 - o Laboratory Name in <h1>

- o Tagline: "Accurate Diagnostics for Better Healthcare"
- Navigation menu with links:
 - o Home
 - o Laboratory Tests
 - o Health Packages
 - o Online Registration
 - o Reports
 - o Contact Us
- Footer with copyright information.

Concepts Tested

- HTML5 document structure
- Semantic elements
- Headings
- Hyperlinks

Deliverable: index.html

Task 2: Display Laboratory Tests using Lists

Scenario

Display various laboratory services offered by the diagnostic center.

Requirements

Create

Ordered List

- Patient Testing Process
 1. Patient Registration
 2. Sample Collection
 3. Laboratory Testing
 4. Report Generation
 5. Doctor Consultation

Unordered List

- Types of Laboratory Tests
 - o Blood Tests
 - o Urine Tests
 - o Thyroid Profile
 - o Liver Function Test

- o Kidney Function Test
- o Lipid Profile
- o Diabetes Tests

Description List

Explain

- CBC
- HbA1c
- LFT
- KFT
- ECG

Use formatting tags

-
- <i>
- <mark>

Concepts Tested

- Lists
- Formatting Tags
- Text-Level Formatting

Deliverable: laboratory-tests.html

Task 3: Laboratory Test Details Page

Scenario

Create a page displaying complete details of a diagnostic test.

Requirements

Display

- Test Name
- Purpose
- Sample Required
- Preparation Instructions
- Normal Reference Range
- Report Delivery Time

Highlight

- Important Instructions
- Fasting Requirements

Use

-
-
- <mark>
- <small>
-

- <hr>

Concepts Tested

- Block-level Elements
- Inline Formatting
- HTML Formatting Tags

Deliverable: test-details.html

Task 4: Laboratory Gallery using Images

Scenario

Create a gallery showcasing laboratory infrastructure.

Requirements

Display images of

- Clinical Laboratory
- Blood Collection Room
- Automated Analyzer
- Sample Processing Area

Each image should

- Open a detailed information page
- Include
 - o alt
 - o title
 - o width
 - o height

Use

- <figure>
- <figcaption>

Concepts Tested

- Images

- Hyperlinks
- Global Attributes

Deliverable: gallery.html

Use

- <map>
- <area>

Task 5: Interactive Image Map of Test Strip

Scenario

Provide an interactive urine test strip.

Requirements

Display a urine test strip image.

Create clickable regions for

- Glucose Pad
- Protein Pad
- Blood Pad
- Ketone Pad
- pH Pad

Concepts Tested

- Image Maps
- Hyperlinks

Deliverable: lab-map.html

Task 6: Laboratory Test Price Table

Scenario

Display available laboratory tests and charges.

Requirements

Create a table with

- Test Code
- Test Name
- Department
- Cost
- Sample Type

- Report Time

Use

- <caption>
- <thead>
- <tbody>
- <tfoot>
- rowspan
- colspan

Apply suitable formatting.

Concepts Tested

- HTML Tables
- Table Formatting

Deliverable: test-price-table.html

Task 7: Online Patient Registration Form

Scenario

Develop an online patient registration page.

Requirements

Create form controls for

- Patient Name
- Age
- Gender
- Mobile Number
- Email
- Date of Birth
- Test Selection
- Preferred Appointment Date
- Sample Collection Preference
- Upload Doctor Prescription

Include

- <label>
- <fieldset>
- <legend>

Apply HTML5 validation

- required
- placeholder
- pattern
- autofocus

Concepts Tested

- HTML Forms
- HTML5 Input Types
- Validation Attributes

Deliverable: patient-registration.html

Task 8: Embed Health Information using IFrame

Scenario

Provide useful health resources for patients.

Requirements

Embed

- National Health Portal
- Google Maps showing laboratory location

Use

- <iframe>

Place the content under

Health Information Centre

Concepts Tested

- IFrame
- External Web Resources

Deliverable: health-information.html

Task 9: Add Multimedia & Executable Content

Scenario

Create a patient awareness page.

Requirements

Add

- Video explaining laboratory sample collection procedures
- Audio instructions for patients before testing
- JavaScript alert

Welcome to the Clinical Laboratory Management System

Use

- <video>
- <audio>
- <script>

Enable

- controls
- autoplay
- loop

Concepts Tested

- Multimedia
- JavaScript
- Executable Content

Deliverable: media.html

Code :

  <title>Laboratory Test Details</title>
</head>
<body style="background-color: bisque;">
  <h1>Laboratory Test Details</h1>
  <hr>

  <h2><strong>CBC Test</strong></h2>
  <hr>

  <h3>Purpose</h3>
  <p>A Complete Blood Count is a common blood test used to check overall health,
screen for medical issues,
    find the cause of unexplained symptoms like tiredness or fever, and
monitor treatments or chronic diseases</p>
  <hr>

  <h3>Sample Required</h3>
  <p>A Complete Blood Count test requires a small <em>venous blood sample </em>
typically 2 to 3 milliliters<br>
    Drawn from a vein in your arm, usually inside the elbow.
    The blood is collected directly into a lavender or purple-top vacuum tube
containing EDTA, an anticoagulant that stops the blood from clotting</p>
  <hr>

  <h3>Preparation Requirements</h3>
  <p>
    <strong>No special preparation or fasting</strong> is usually needed for a
Complete Blood Count (CBC) test.
    <b>Eat normally:</b> Food does not change basic blood cell counts.
    <b>Drink water:</b> Drink plenty of water before the test.
    Good hydration makes your veins larger and easier to find.
    <mark>Avoid alcohol and smoking</mark>
  </p>
  <hr>

  <h3>Normal Reference Range</h3>
  <p>
    RBC Count: 4.5 - 5.5 million/ $\mu$ L <br>
```

```

WBC Count: 4,000 - 11,000/ $\mu$ L <br>
Platelet Count: 150,000 - 450,000/ $\mu$ L
</p>
<small>Reference ranges may vary slightly depending on the laboratory and
equipment used.</small>
<hr>

<h3>Report Delivery Time</h3>
<p>Reports are typically available within <strong>6 to 8 hours</strong> of
sample collection.</p>
<hr>

Task1:-

Welcome to Arjun Path labs

Accurate Diagnostics for Better Healthcare

[Home page](#) | [Laboratory test](#) > [Health Packages](#) | [Online Registration](#) | [Reports](#) | [Contact Us](#) |

About Our Laboratory

Arjun Path Labs is a multi-specialty diagnostic center offering accurate and timely laboratory testing services, including our AI-enabled Urine Test Strip Reader System for fast, reliable results.

Health Tip of the Day

Regular health check-ups help detect conditions early. Get your annual blood and urine test done to stay ahead of potential health risks.

Lab Timings

Monday - Saturday: 7:00 AM - 8:00 PM

Sunday: 8:00 AM - 2:00 PM

© 2026 Arjun Path Labs. All rights reserved.

Task 2:-

Laboratory Tests

[Home](#) | [Laboratory Gallery](#) | [Urine Strip Info](#) |

Patient Testing Process

1. Patient Registration
2. Sample Collection
3. Laboratory Testing
4. Report Generation
5. Doctor Consultation

Types of Laboratory Tests

- Blood Tests
- Urine Tests
- Thyroid Profile
- Liver Function Test
- Kidney Function Test
- Lipid Profile
- Diabetes Tests

CBC

A *Complete Blood Count* is a standard blood test that measures red blood cells, white blood cells, and platelets to evaluate overall health, **diagnose conditions like anemia or infection**, and monitor medical treatments [more details](#)

HbA1c

This test measures your **average blood sugar levels over the past two to three months**

LFT

A *Liver Function Test* is a group of blood tests that measures specific enzymes, proteins, and waste products to check how well your liver works. It helps find **liver damage, infections, or diseases**.

KFT

A *Kidney Function Test*, also called a renal function test, is a panel of blood and urine tests used to **measure how well your kidneys filter waste**, balance fluids, and manage essential minerals

ECG

A quick, safe, and painless medical test that records the electrical signals traveling through your *Electrocardiogram* - Mayo Clinic heart. It uses small sticky patches (electrodes) placed on your skin to **map heart rhythm, rate, and structural changes**.

Task 3:-

Laboratory Test Details

CBC Test

Purpose

A Complete Blood Count is a common blood test used to check overall health, screen for medical issues, find the cause of unexplained symptoms like tiredness or fever, and monitor treatments or chronic diseases

Sample Required

A Complete Blood Count test requires a small *venous blood sample* typically 2 to 3 milliliters
Drawn from a vein in your arm, usually inside the elbow. The blood is collected directly into a lavender or purple-top vacuum tube containing EDTA, an anticoagulant that stops the blood from clotting

Preparation Requirements

No special preparation or fasting is usually needed for a Complete Blood Count (CBC) test. **Eat normally:** Food does not change basic blood cell counts. **Drink water:** Drink plenty of water before the test. Good hydration makes your veins larger and easier to find. **Avoid alcohol and smoking**

Normal Reference Range

RBC Count: 4.5 - 5.5 million/ μ L
WBC Count: 4,000 - 11,000/ μ L
Platelet Count: 150,000 - 450,000/ μ L

Reference ranges may vary slightly depending on the laboratory and equipment used.

Report Delivery Time

Reports are typically available within **6 to 8 hours** of sample collection.

Task 4:-

Laboratory Gallery

Clinical Laboratory

Blood Collection Room

Blood Collection Room

Automated Analyzer

Sample Processing Area

[Back](#) [Home](#)

Img 1:-

Clinical Laboratory

Our Clinical Laboratory is a fully equipped diagnostic facility staffed by trained pathologists and technicians. It handles a wide range of tests including blood work, urine analysis, and biochemical panels, ensuring accurate results through standardized testing protocols and quality control checks.

[Back](#) | [Home](#)

Img 2:-

Blood Collection Room

The Blood Collection Room is a dedicated, hygienic space where trained phlebotomists collect blood samples from patients. It is designed to ensure patient comfort and safety, with proper sterilization procedures and single-use collection materials to prevent contamination.

[Back](#) | [Home](#)

Img 3:-

Automated Analyzer

Our Automated Analyzer is a high-precision machine used to process blood and urine samples rapidly and accurately. It minimizes human error, increases testing efficiency, and delivers reliable diagnostic results for parameters like blood counts, glucose levels, and liver function markers.

[Back](#) [Home](#)

Img 4:-

Sample Processing Area

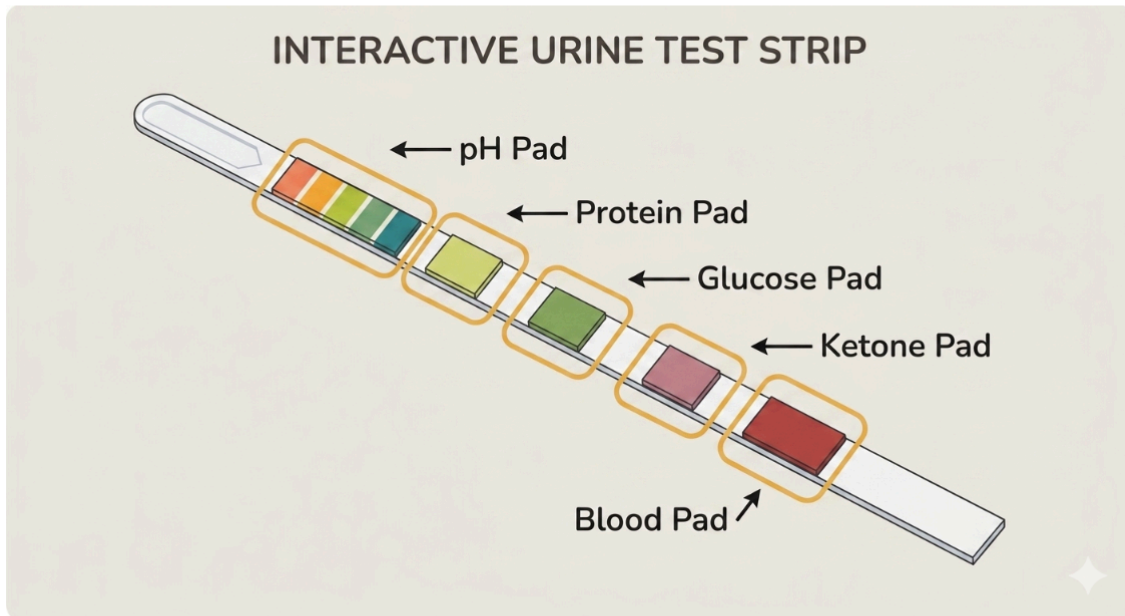

The Sample Processing Area is where collected samples are sorted, labeled, and prepared for testing. This area maintains strict temperature and handling protocols to preserve sample integrity before they are analyzed by our laboratory technicians.

[Back](#) [Home](#)

Task 5:-

Urine test strip

Click on a pad to learn more about what it detects.

[Back](#) | [Home](#)

Area 1:-

pH Pad

The pH pad measures the acidity or alkalinity of urine, typically ranging from 4.5 to 8.0. Abnormal pH levels can indicate urinary tract infections, kidney stones, or metabolic imbalances.

[Back](#) | [Home](#)

Area 2:-

Protein Pad

The protein pad detects the presence of protein, especially albumin, in urine. Elevated protein levels can be an early sign of kidney disease or damage, and are monitored closely in diabetic and hypertensive patients.

[Back](#) [Home](#)

Area 3:-

Glucose Pad

The glucose pad detects sugar levels in urine. Glucose is not normally present in urine, so its detection often indicates uncontrolled diabetes or other conditions affecting blood sugar regulation.

[Back](#) [Home](#)

Area 4:-

Ketone Pad

The ketone pad detects ketone bodies in urine, which form when the body breaks down fat for energy instead of glucose. High ketone levels can indicate uncontrolled diabetes, starvation, or a low-carbohydrate diet.

[Back](#) [Home](#)

Area 5:-

Blood Pad

The blood pad detects the presence of red blood cells or hemoglobin in urine. This can point to urinary tract infections, kidney stones, or, in some cases, more serious kidney or bladder conditions.

[Back](#) [Home](#)

Task 6:-

Test price table

Prices for the various tests available are listed below

Laboratory Test Prices

Test Code	Test Name	Department	Cost	Sample Type	Report Time
T001	Complete Blood Count	Hematology	₹300	Blood	6 hours
T002	HbA1c	Biochemistry	₹450	Blood	8 hours
T003	Liver Function Test (LFT)	Biochemistry	₹600	Blood	12 hours
T004	Kidney Function Test (KFT)		₹550	Blood	12 hours
T005	ECG	Cardiology	₹250	N/A	30 minutes

Prices are subject to change. Contact the lab for current rates.

Conclusion and Discussion:

This experiment helped me learn HTML by actually building a full healthcare website, Arjun Path Labs, step by step — from basic page structure to lists, images, an image map, tables, a form, embedded content, and a bit of JavaScript. Debugging my own mistakes along the way made the concepts stick far better than just reading about them. I now have a solid, practical foundation in HTML

Feedback from friends:- It's perfect!
